

QUICK GUIDE

Requesting Access

How to sign in for the first time, and which group to ask for.

You need an Active Directory group, not an app account

There's no separate username or password for STO Management — access is controlled entirely through Active Directory group membership. Once you're in the right group, signing in with your normal company credentials just works.

HOW TO REQUEST — IN SERVICENOW

1. Go to **Service Catalog** → **Accounts, Access & Authentication** → **Modify Active Directory Group Membership**
2. Active Directory Item: **Security Groups**
3. Action Type: **Add Account(s)**
4. Account type: **Regular User Accounts**
5. Group List: search `app-{site}-sto` and pick the exact group from the table on the next page

The screenshot shows the ServiceNow interface for the 'Modify Active Directory Group Membership' request form. The breadcrumb trail is: Home > Service Catalog > Accounts, Access & Authentication > Modify Active Directory Group Membership. The form is divided into three tabs: 'Describe Needs' (active), 'Choose Options', and 'Summary'. Under 'Describe Needs', there is a list of account types: Regular User Accounts (511), Admin Accounts (A-, I- or SVC- prefix), Test Accounts (TST- prefix), BOT Accounts (BOT- prefix), KIOSK Accounts (K- prefix), SHARED Accounts (X- prefix), and Workstation Admin Accounts (W- prefix). Below this list are three dropdown menus: '* Active Directory Item' (set to 'Security Groups'), '* Action Type' (set to 'Add Account(s)'), and '* What type of accounts would you like to add?' (set to 'Regular User Accounts'). A 'Next' button is at the bottom right. A chatbot icon with the text 'Hi, I'm AWA. Need help?' is also visible.

The ServiceNow request form — Active Directory Item, Action Type, and Account type fields.

☐ Do you want to add a short comment only visible to you when viewing your tickets.

Request Details

• Group List

APP-ABC-STO_Management_Logistics	These groups will be for an app and user based views
APP-ABC-STO_Management_Logistics_Receiving	For the role based authentication for STO management app
APP-ABC-STO_Management_Management	These groups will be for an app and user based views

Previous Next

Searching the Group List for "app-{site}-sto" surfaces every STO Management group for that site.

Groups are per site

Every group below applies to **one site** — ABC, ABL, ABS, MBM, etc. If your job touches more than one site, submit the request above once per site — you can hold more than one group at a time.

PICK YOUR GROUP

What each group can do

Most common

Basic access — APP-{SITE}-STO_Management_Site

Create new STO requests and view requests for your site. **Cannot approve, reject, or edit anything** once a request moves past your own draft. This is the right group if you just need to submit requests and check their status — most people who aren't part of Planning, Logistics, or Management fall here.

Group suffix	What it's for
_Planning	Reviews new requests first; can approve, send back for revision, or reject.
_Logistics	Adds freight and shipping details after Planning approves; routes the request onward.
_Management	Shipping-site sign-off — only required for high-value, cold-chain, controlled, or otherwise flagged shipments.
_Management_Receiving	Same as above, but the receiving-site sign-off. A distinct group — one doesn't grant the other.
_Logistics_Receiving	Confirms receipt at the destination site and closes out the delivery.
_Site	Basic access — create and view only, no approvals at any stage. See above.

Every group name follows the same pattern: APP-{SITE}-STO_Management_{suffix} — e.g. APP-ABC-STO_Management_Planning for Planning at site ABC.

COMPANY-WIDE ADMIN

There's also a single company-wide APP-STO_MANAGEMENT_ADMIN group, not tied to any one site — reserved for app administrators, not requested for day-to-day use.
