

STO Management — User Guide

Stock Transfer Order workflow: creating, reviewing, approving, and closing transfers.

1. Overview

The STO Management app tracks a stock transfer from initial request through shipping, approvals, and receipt. Each STO moves through a series of steps; at each step, the responsible role acts on it. Your role and site are determined by your Active Directory group membership.

Workflow: Draft → Planning Review → Shipping Logistics → Shipping Management → Receiving Management → Shipping Logistics (confirm) → Receiving Logistics → Closed

When no management approval is required (low value, non-cold-chain, freight within limits), the STO skips the two management steps and the confirm pass: Shipping Logistics → Receiving Logistics → Closed.

2. Roles

Role	Responsibility
Receiving Site (Requestor)	Creates the STO request and material information; submits for review.
Shipping Planning	Reviews inventory, adds MPN / batch / expiration; approves, requests revision, or rejects.
Shipping Logistics	Enters shipment details (freight, dates, STO number); confirms after management approval.
Management	Approves high-value / cold-chain shipments at both shipping and receiving sites.
Receiving Logistics	Records receipt and closes out the delivery.
Admin	Can edit any STO, step it back (revert / send back), and export the audit trail.

3. Creating a Request (Requestor)

1. Click **New Request**.
2. Fill in requestor info, priority, and the **From Site** and **To Site**.
3. The **Standard Estimated Ship Date** is auto-calculated from priority (P1 = 15 days, P2 = 30, P3 = 45). If it falls on a weekend it is pushed to the following Monday. Check *Rush* to edit it manually.
4. Enter material details: SAP number (8 digits), description, quantity (whole number), UOM, shipping condition, and material value (USD).
5. If the shipping condition is **2-8C**, **below 0**, or **Frozen**, management approval will be required later.
6. If **Controlled Shipping** is checked, add the required handling comment.
7. Save the draft. You (or an admin) can edit it while it is still a Draft.
8. Open the STO and click **Submit for Planning Review**.

4. Planning Review (Shipping Planning)

1. Open the STO in your queue and complete MPN Number, Batch Number, and Expiration Date.
2. Choose one:
 - **Approve** — sends it to Shipping Logistics.
 - **Request Revision** — sends it back to the requestor as a Draft with your note; a note is required.
 - **Reject** — ends the STO; a note is required.

5. Shipping Logistics

Enter container information, freight cost, STO Number, Shipment ID, and the relevant dates. Submitting routes the STO to management if approval is required, otherwise straight to Receiving.

After management approval, the STO returns here to confirm. At that point **Actual Ship Date, Estimated Delivery Date, PGI Date, and Ready to Ship** are mandatory before it can continue.

6. Management Approvals

When required, the shipping-site management approves first, then the receiving-site management. Approval is required when material value > \$100,000, freight > \$20,000, freight > 30% of material value, or the shipment is cold-chain (2-8C / below 0 / frozen). After both approve, the STO returns to Shipping Logistics for confirmation.

7. Receiving Logistics

Record the Actual Receipt Date and check **Close Out Delivery** to mark the STO as Closed. A completion email is sent to the requestor.

8. Admin Actions

- **Revert One Step** — quietly moves the STO back one workflow step. Click repeatedly to keep stepping back.
- **Send Back a Step** — moves it back one step with a required reason shown to the previous team.
- **Export Audit Trail** — downloads the full history as an Excel-friendly CSV (admins only).

9. Filtering the STO List

On the **All STOs** page you can filter by status, priority, From/To site, route, requestor, and a Need-By date range. Filters also apply to the CSV export.
